

## ***Bag Replacements: Questions to ask for retrofitting systems***

- 1. What is the reason for changing from conventional bags to pleated bags?***
- 2. What media is being used now?***
- 3. What problems have they been having?***
- 4. Has their dust collection equipment been altered since first bought?***
- 5. Have their motors, fans or blow-off systems been changed since new?***
- 6. Has the customer added any new equipment which now requires more air flow?***
- 7. Has an engineer looked at their complete system to analyze the retrofitting possibility?***

Any large retrofitting applications will be passed on to our engineering group. They may want to inspect the system before giving a recommendation.

Note: Pleated Bag data sheet to be filled out.
